Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(c), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(c) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 3/27/09 has been entered.

Claims 7 and 9-15 are present in the application, wherein claims 12-15 are newly added and 1-6 and 8 have been cancelled in amendment filed 3/27/09.

Claims 7, 9-15 are allowable.

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:
Applicant's invention (claim 7) is directed to a method for warm compaction which comprises attaching a powder consisting of a hydroxyl fatty acid salt having an average particle diameter of 50 μm or less on a forming surface of a mold; and using a warm molding raw material powder in powder metallurgy, the warm molding raw material powder comprising a lubricant which consists of a hydroxyl fatty acid salt having an average particle diameter of from 5 μm to 100 μm in a range of from 0.3 wt% to 2 wt%.

US 2001/0038802 discloses a method for warm compacting powder composition comprising a metal powder and a lubricant which can be lithium hydroxyl stearate. See [0079] and [0080]. US 2001/0038802 also discloses a lubricant for die lubrication consisting of a mixed

Art Unit: 1793

powder of at least two different lubricants each having a melting point higher than a predetermined temperature of the compaction pressure. See abstract and [0020]. Table of 1-1, compaction nos 2, 3 and 6 discloses using die lubricant comprising lithium hydroxystearate as one of the at least two lubricant. US 2001/0038802 therefore does not teach or suggest using lithium hydroxystearate as the only lubricant for the die.

U.S. Patent No. 6,140,278 to Thomas et al discloses a lubricated ferrous metal composition comprising metal powder and 0.1 to 3 wt% of a high density polyethylene lubricant based on the total weight of the composition. Thomas teaches the polyethylene may be the only lubricant or additional lubricant, as for example lithium 12-hydroxy stearate, may be used (admixed or sprayed the die cavities or punches) to improve lubrication or the flowability of the powder composition. See column 4, lines 13-17. Lithium 12-hydroxyl stearate is used as additional lubricant to the polyethylene in the powder composition.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to NGOCLAN T. MAI whose telephone number is (571)272-1246. The examiner can normally be reached on 8:30-5:00 PM Monday-Friday.
